GEOiD Software suite

"A must have for every cost-estimation department. GEO products make our work so much quicker, easier and enjoyable."

GEO Instrument is a system house located in Arnhem (NL) dedicated since 1978 to the development of products to take-off quantities from digital drawing in a.o. bmp, jpeg, PDF, DXF, DWG, DWF, PLT and PLT format.

The 'take-off systems' are in use by many thousands users in a.o. the Netherlands, Belgium, Germany, Turkey and France.

Users are architectural agencies, project developers, construction companies, roofing and interior furnishing companies, facility management such as cleaning companies, installation companies, construction material suppliers, local and governmental officials and many more.

ADVANCED SIMPLICITY

GEO products are well-known by the simplicity in which complex matters can be addressed. So measuring is not only accurate and rapid, your measurements are displayed graphically and are automatically included in a transparent measuring status. Graphical information and measurements are linked to each other. So you simply and always know what you have measured and what still needs to be done, simply transparent.

Transparency has its advantages. Not just you but for presentations the project leader too can show all essential information graphically, filter, sort, totalize, print, copy, paste and export to any cost-estimation software or spreadsheet. Quick and comfortable for the lowest possible costs.

TIME SAVING UP TO 80% ON TAKE-OFFS

But you do not only measure, you simultaneously apply codes by using the convenient GEOiD-Menu, a configurable set of cost-estimation codes, measure and edit functions, line and hatch patterns, symbols, default values and much more.

With one click on the GEOiD-Menu multiple actions are automatically combined to one swift action.

GEOiD-Viewer. Use the included GEOiD-Viewer to exchange project information in a professional way with third parties by using the advanced web project saving and exchange features. Collect and combine information much quicker with far lesser paper which is better for the environment.

GEO products are made for MS Windows Vista, Windows 7 and 8 as tablet, PC or server based license in six languages: Chinese, Dutch, English, German, French and Spanish.

Feel free to contact us for additional information or demonstration.
