

Using the information below you will be able to use the GEOiD software via the COL-Server (COL license);

1) Download and register:

- a) Download the GEOiD_ColServer_Setup.exe from <http://www.geo-instrument.com/GEOiD.asp>;
- b) After installing you can start the LNS.exe via "Start-Programs-GEOiD-COL";
- c) The COL-Server software opens with the message "Security Database Fault";
- d) Go to <http://www.geo-instrument.com/Weblicense.asp> and enter the required information:

Username:

Password:

- e) Copy ID1 and ID1 from the COL-Server window and paste it in the identical web page entry fields;
- f) Enter the servername (including IP-Address);
- g) Press the download button and save the COL-Server license in C:\Program Files (x86)\GEOiD-COL (standard);
- h) Restart the COL-server;
- i) In the subfolder "svc" you will find information on how to run the COL-server as a service.

2) Installation procedure local software:

- a) Download the GEOiD software from <http://www.geo-instrument.com/GEOiD.asp>;
- b) Install GEOiD with Administrator rights;
- c) If previously a local license was used (for example for demo purposes), please remove the file QuinqS.dll from the folder C:\Programdata\GEOiD\System;
- d) If GEOiD doesn't start and instead the message 'COL-server cannot be found' is displayed, check http://www.geo-instrument.com/Downloads/GEOiD_Networkinstallation.pdf for more information. The best result is achieved by selecting Directed COL (page 30).
